Excerpt from Preventing Damage by Termites or White Ants The nests of some species of termites 1 are in the earth and in dead and decaying wood. These species are of subterranean habit, timber and trees being attacked by the workers only through the ground. The nests of some other species,2 however, are excavated in Wood and trees by the winged forms, there being no workers and no under ground life. With the clearing of land and the consequent destruction of their natural breeding places in the dead trees, decaying stumps, and logs of the forests, termites become increasingly destructive to the woodwork and contents of buildings (figs. 3 telephone poles, fences, or any timber in contact with the ground, as well as to living vegetation, including not only fruit and shade trees, shrubs, and ?owers, but also truck (fig. 10) and field crops and, in California.
