Architecting and Modeling Automotive Embedded Systems

By Larses, Ola

Condition: New. Publisher/Verlag: VDM Verlag Dr. Müller | Technology, Methods and Management | Good design and management of automotive electronics and software provides a strong competitive advantage. Electronics are driving current innovations but must be introduced in the vehicle without compromising the final price tag. At the same time electronics has to compete with, and win over, the dependability of proven mechanical solutions. This book provides a broad perspective on the topic of Architecting and Modeling Automotive Embedded Systems to help improve costs and dependability by understanding technologies, methods and management. An overview of applications and technologies of automotive electronics is given, together with a deeper discussion on the cost-efficiency and dependability requirements posed on automotive systems. Also a quantitative method for modular architecture design, based on an information model, is described. Such an information model is a key enabler for managing the increasing complexity of automotive electronics, it provides the analyzability needed to ensure the dependability of the systems. The ideas and methods presented in this book have been developed and tried in an industrial setting through a range of case studies. | Format: Paperback | Language/Sprache: english | 428 gr | 316 pp.

Reviews

I actually started looking over this publication. It really is rally interesting throgh studying period. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- Dana Hintz

Good electronic book and valuable one. It really is basic but unexpected situations in the 50 percent in the pdf. You wont really feel monotony at at any moment of your time (that's what catalogues are for concerning when you ask me).

-- Elisa Reinger
